London, U.K. / 2014-2015

Characteristics
Client
Scope
Architect

internal truss and concrete slab, construction by heavy lifting
Dragados
tender design
Heatherwick Studio / ARUP

The Garden Bridge project was a private proposal for a pedestrian bridge over the River Thames in London.

The proposed concrete, steel, cupronickel clad structure was intended to carry pedestrians, with no cycles or other vehicles. It was to have been located some 200 metres (660 ft) from Waterloo Bridge and 300 m (980 ft) from Blackfriars Bridge, and have included some areas of planting.
